

Helping Goodlegal Meeting Regulatory And Security Standards For ISO 27001/9001 Certifications

The Background

As a legal infrastructure platform, Goodlegal is responsible for managing a significant amount of sensitive client data, including confidential legal documents and personal information.

To ensure the highest standards of data security and compliance, the company decided to pursue ISO 27001 and ISO 9001 certifications. However, the company did not have the internal expertise or resources to meet the regulations for these certifications on their own.

The Challenge

For Goodlegal the main challenge was to find a qualified and experienced partner who could help them navigate the complex process of achieving ISO 27001 and ISO 9001 certifications.

In addition, the company had a tight timeline of under three months for achieving these certifications, as several of their biggest clients required these advanced security standards as soon as possible.

Therefore these certifications would also help them maintain existing contracts and win new businesses.

About the Company

Goodlegal is a legal infrastructure platform, providing tools and services that help businesses to manage their legal operations more efficiently.

The platform includes features such as contract management, e-signatures, and compliance tracking, and is used by a range of clients across various industries.

Goodlegal's vision is to make legal compliance easy and accessible to everyone through a technical framework. It leverages industry standard legal content and latest tech features to help its clients manage all business legal actions in one place.

The Solution

Haar conducted a comprehensive assessment of the platform's existing systems and processes, identified areas for improvement, and developed a detailed roadmap for achieving the required certifications.

This included a range of activities such as policy and procedure development, employee training, and system upgrades.

As said, the compliance process began with an initial assessment of Goodlegal's existing processes and systems.

Haar worked with the Goodlegal's team to develop and implement a range of improvements and upgrades, including:

- Developing and implementing a new information security policy.
- Conducting training sessions for all employees on information security best practices.
- Implementing two-factor authentication for all users.
- Upgrading the platform's infrastructure to include more robust firewalls and intrusion detection systems.

Results & Improvements

Haar managed to help Goodlegal achieve ISO 27001 and ISO 9001 certifications within the desired timeframe.

In addition to achieving these certifications, Haar cyber security team helped Goodlegal identify and address a range of vulnerabilities and gaps in their existing processes and systems. This resulted in significantly improving the platform's overall cyber security state, and helped mitigate the risk of data breaches and other security incidents.

Overall, the partnership was a success, enabling Goodlegal to achieve their compliance goals while also improving their overall security approach and reputation in the market.
